

Abilene Regional Airport

AIRPORT CATCHMENT ANALYSIS

asm-global.com

Methodology

This Catchment Analysis Report uses Airline Data Inc's (ADI) proprietary domestic zip code identification methodology which ASM has supplemented with international data.

How is the data calculated?

- ADI data sourced from Google, DOT, and Census
 - Raw data connecting zip to O&D adjusted with full-sample DOT (O&D rate correction) and Census (zip code correction) data
 - Allows a revolutionary skew correction technique for up-sampling data using iterative machine-learning
 - Targeting of zip codes to residential address, eliminating errant corporate card zip codes and disconnected sales locations
 - As a final step, Census data verifies that the reallocated traffic does not result in over-allocation to a particular zip code using economic metrics and population statistics
- ASM has added MIDT data for international travel and correction of DPIJ (domestic portion of international journey)
- Data does not contain international restricted DB1B data and thus is fully available for release to worldwide business partners
- Unlike other sources which leave the user to sort through mountains of potentially corrupt data, these proprietary algorithms already shift sales from invalid or unlikely zip codes using hints derived from other records through a process of iterative, regression-based machine learning.
- Because the data is pre-corrected for data errors, it is essentially one, gigantic nationwide leakage study. This means unlike other data sources that are corrected for a single market, all cross-effects between airports are fully considered. It also means that catchment comparisons between airports are possible on an apples-to-apples basis which isn't available from any other source in the industry.

Methodology

What does the zip code represent?

- Other leakage data most often uses either travel agent location or credit card billing info. The travel agent location is of limited usefulness in that the location is only a little better than random. Credit card billing zip code is better, but is limited by corporate credit cards using home office zip codes.
- This proprietary methodology is intended to represent the consumer home zip code akin to what is reflected in Census data.

What airlines are included?

All airlines present in DB1B/MIDT are included.

What is the base data created?

- All data is built on a point of sale basis allowing us to show zip code, departure airport, and arrival airport along with passenger volume of each combination. Visitors to a zip code are not allocated to an airport in the Origin part of the report. It is common practice in leakage studies to allocate visitor data using the same allocation as originating data. We do not believe there is a strong correlation between a residential origination zip code and a visitor's zip code level destination, since visitors, both business and leisure, tend to stay around areas of high commercial/tourism activity.

Report Summary

- This report consists of two parts: a Resident Leakage Report, identifying originating/resident demand within a pre-defined catchment area of zip codes in the vicinity of ABI Airport, and a Visitor Leakage Report, identifying visitor demand and its distribution by zip code within a pre-defined catchment area of zip codes.
- For 2019, the 90-mile radius catchment generated 1.3 million total annual passengers, 44.8% of which are visitors and 55.2% originate within a 90 mile range. ABI's pre-defined catchment are of 82 zip codes generated just over 733,000 annual passengers during the same period. 43.4% of which are visitors and 56.6% are residents.
- 40% of ABI's catchment population resides 45 miles or less away from the Abilene Regional Airport. 57% of ABI's catchment population lives 70 miles or less away from ABI.
- Within 30 mi from the airport ABI retains almost 33% of the catchment traffic; at 90 mi ABI's leakage rate is 86%.
- ABI retains only 22.1% of traffic originating from ABI's catchment area. The top airports used by passengers originating from the catchment area are Dallas / Ft. Worth Int'l (DFW) at 56.2%, Dallas Love Field at 11.0%, and Austin at 5.9%.

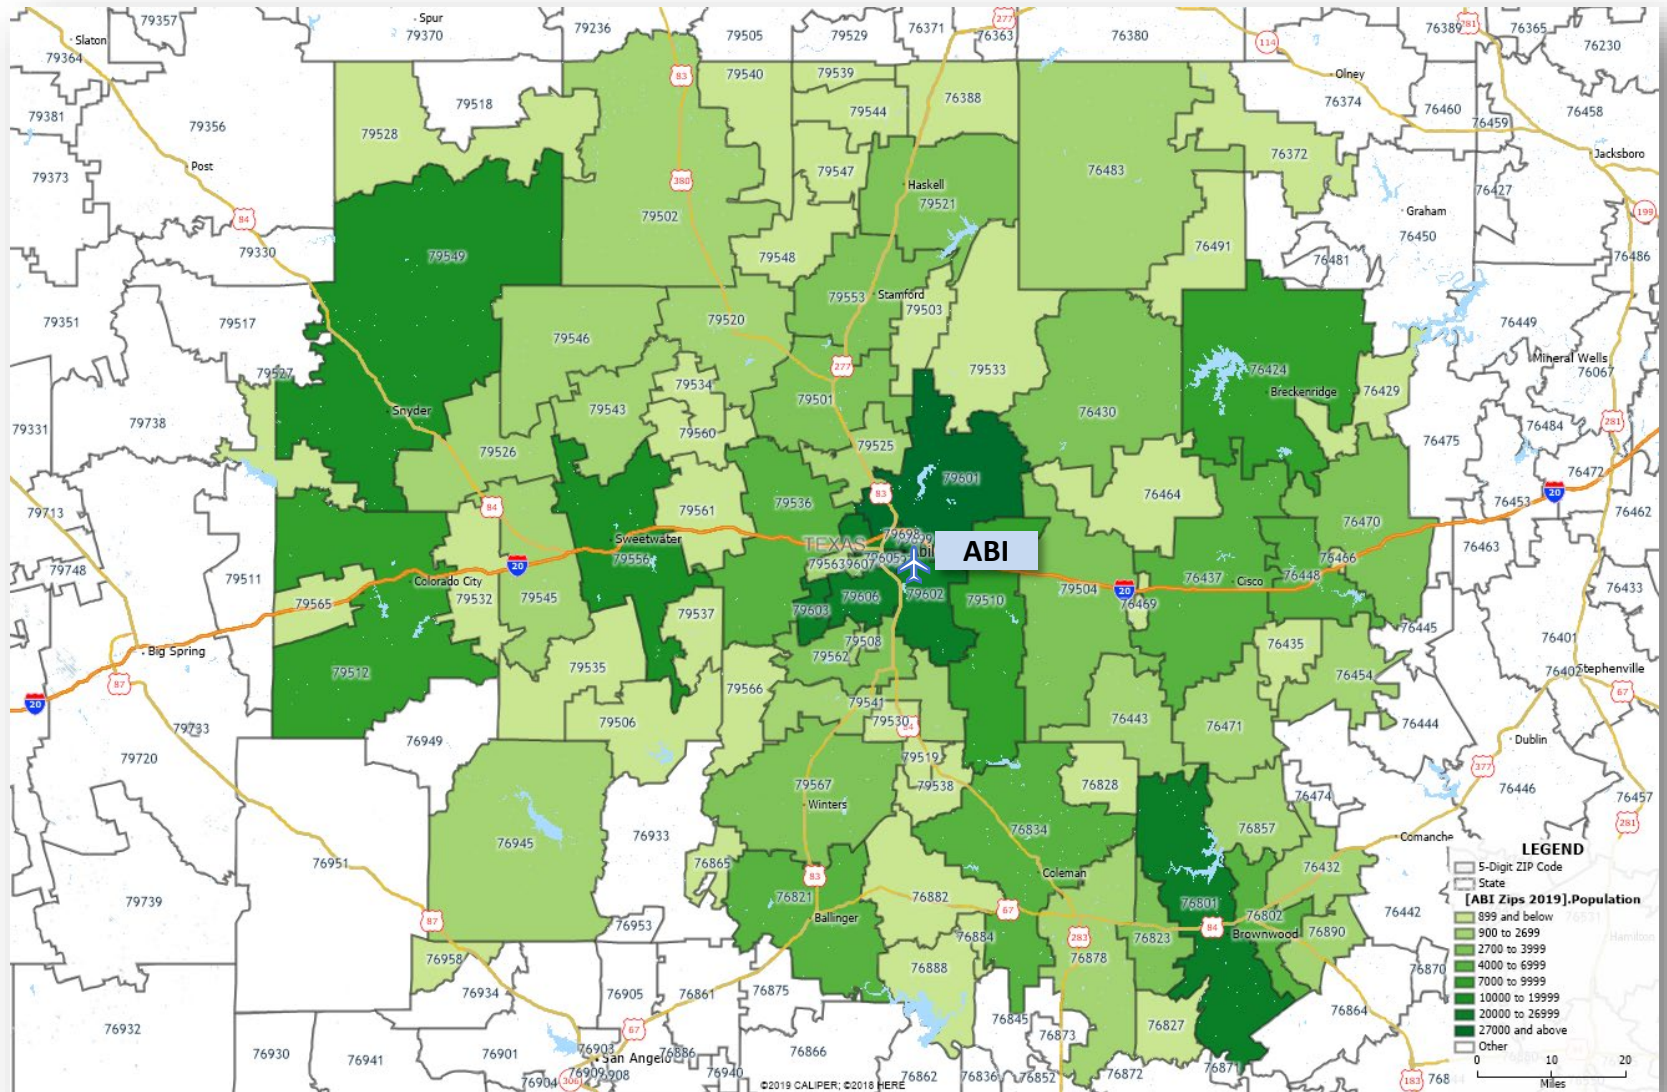

Report Summary

- ABI retains only 23.0% of traffic visitors to ABI's catchment area. The top airports used by passengers visiting the catchment area are Dallas / Ft. Worth Int'l (DFW) at 56.7%, Dallas Love Field at 10.6%, and Austin at 5.4%.
- The top 3 zip codes of 79605, 79602, and 79606 all of which fall within Abilene City and are the largest resident traffic generating zip codes within ABI's catchment area with 81K passengers using any airport.
- The same zip codes are the top 3 zip codes for ABI, located within 5 to 9 mi of ABI airport. ABI captures up to 38% of the passengers originating in those zip codes or a total of 31K. These zip codes encompass 76K residents with an average household income of \$52,797, an average age of 34 years old, 26% of employment in the health sector, and 6% of which are foreign born.
- The largest destination/visitor zip codes in ABI's Catchment are the same as the originating zip codes 79605, 79602, and 79606 with 74K visitors from all airports. 79605, 79602, and 79606 are all Abilene zip codes and these provide the top 3 highest inbound visitor zip codes at 28K using ABI airport.

Report Summary

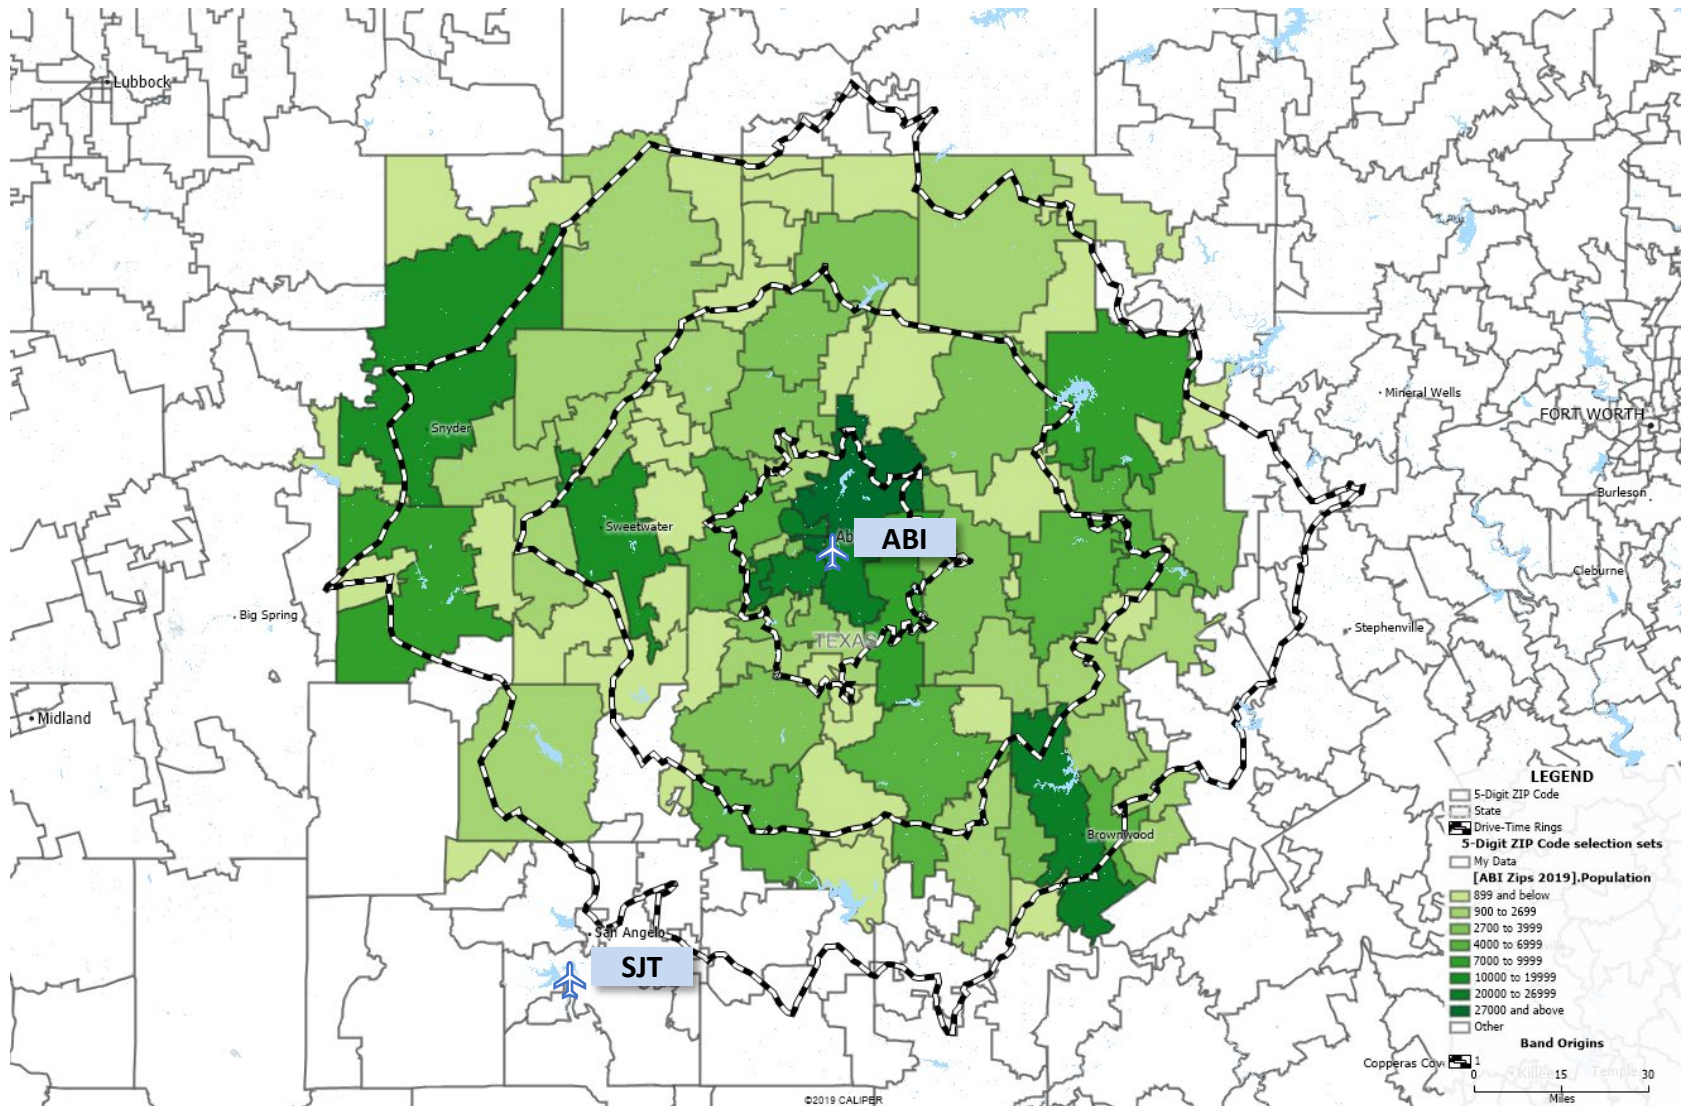

- The top five destinations for traffic residing in ABI's catchment are the LA Basin, Las Vegas, New York / Newark, Denver and Chicago.
- The top five cities for traffic visiting ABI's catchment are the LA Basin, New York / Newark, Chicago, Washington / BWI and Atlanta.
- The top 5 largest international destinations for residents of ABI's catchment are Cancun (CUN), Mexico City (MEX), London (LHR), Toronto (YYZ), San Jose del Cabo (SJD).

ABI Resident / Visitor Traffic Capture Rates

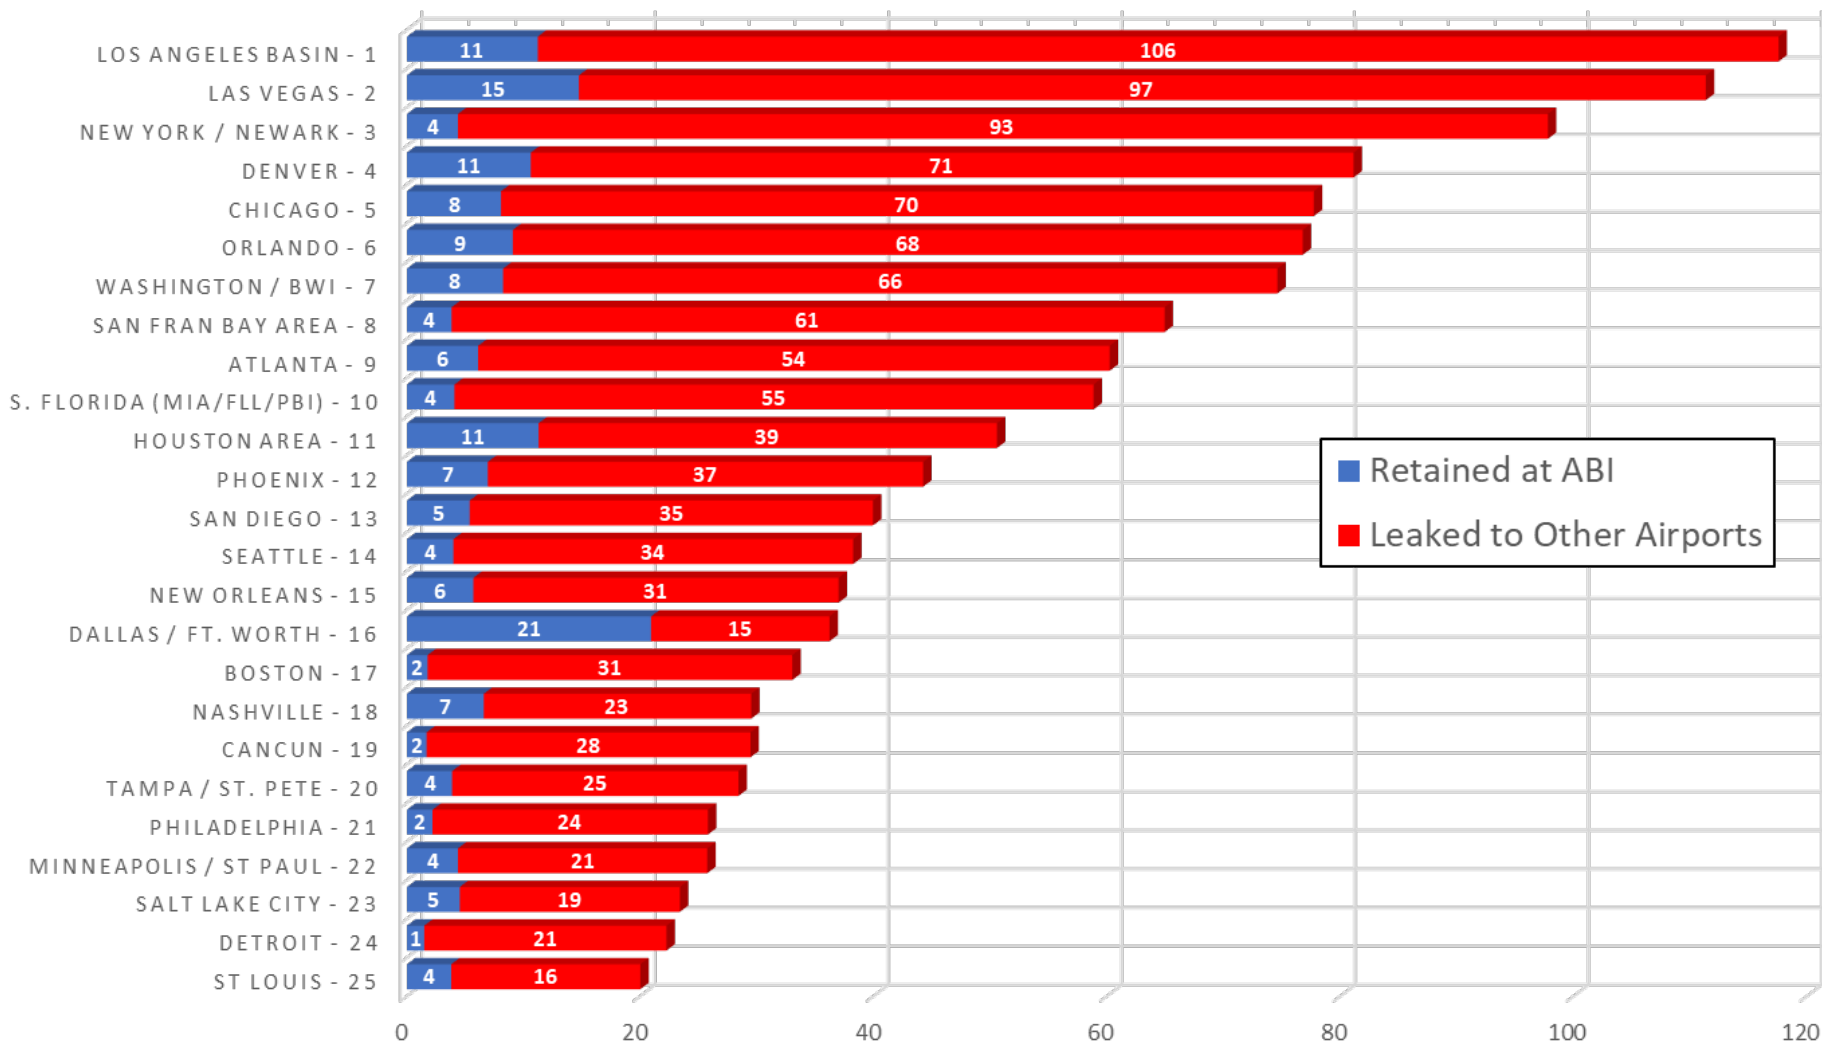

Resident

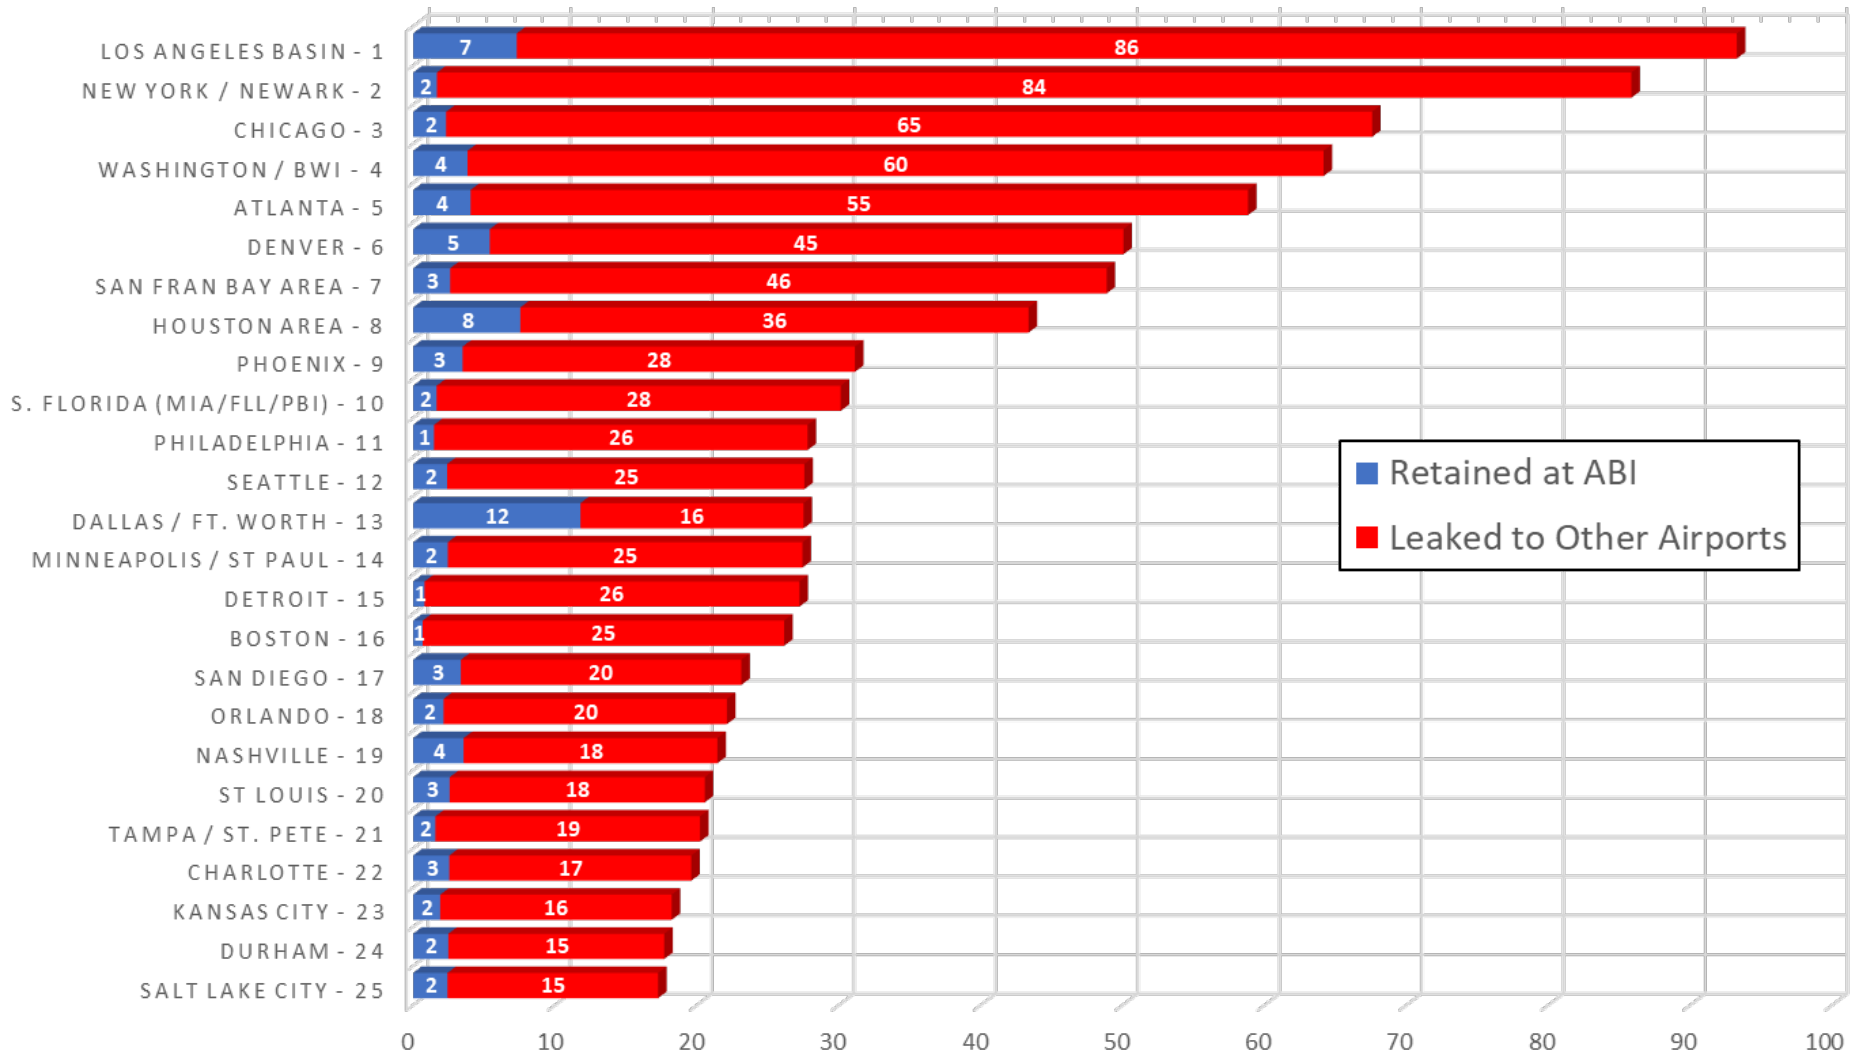

Visitor

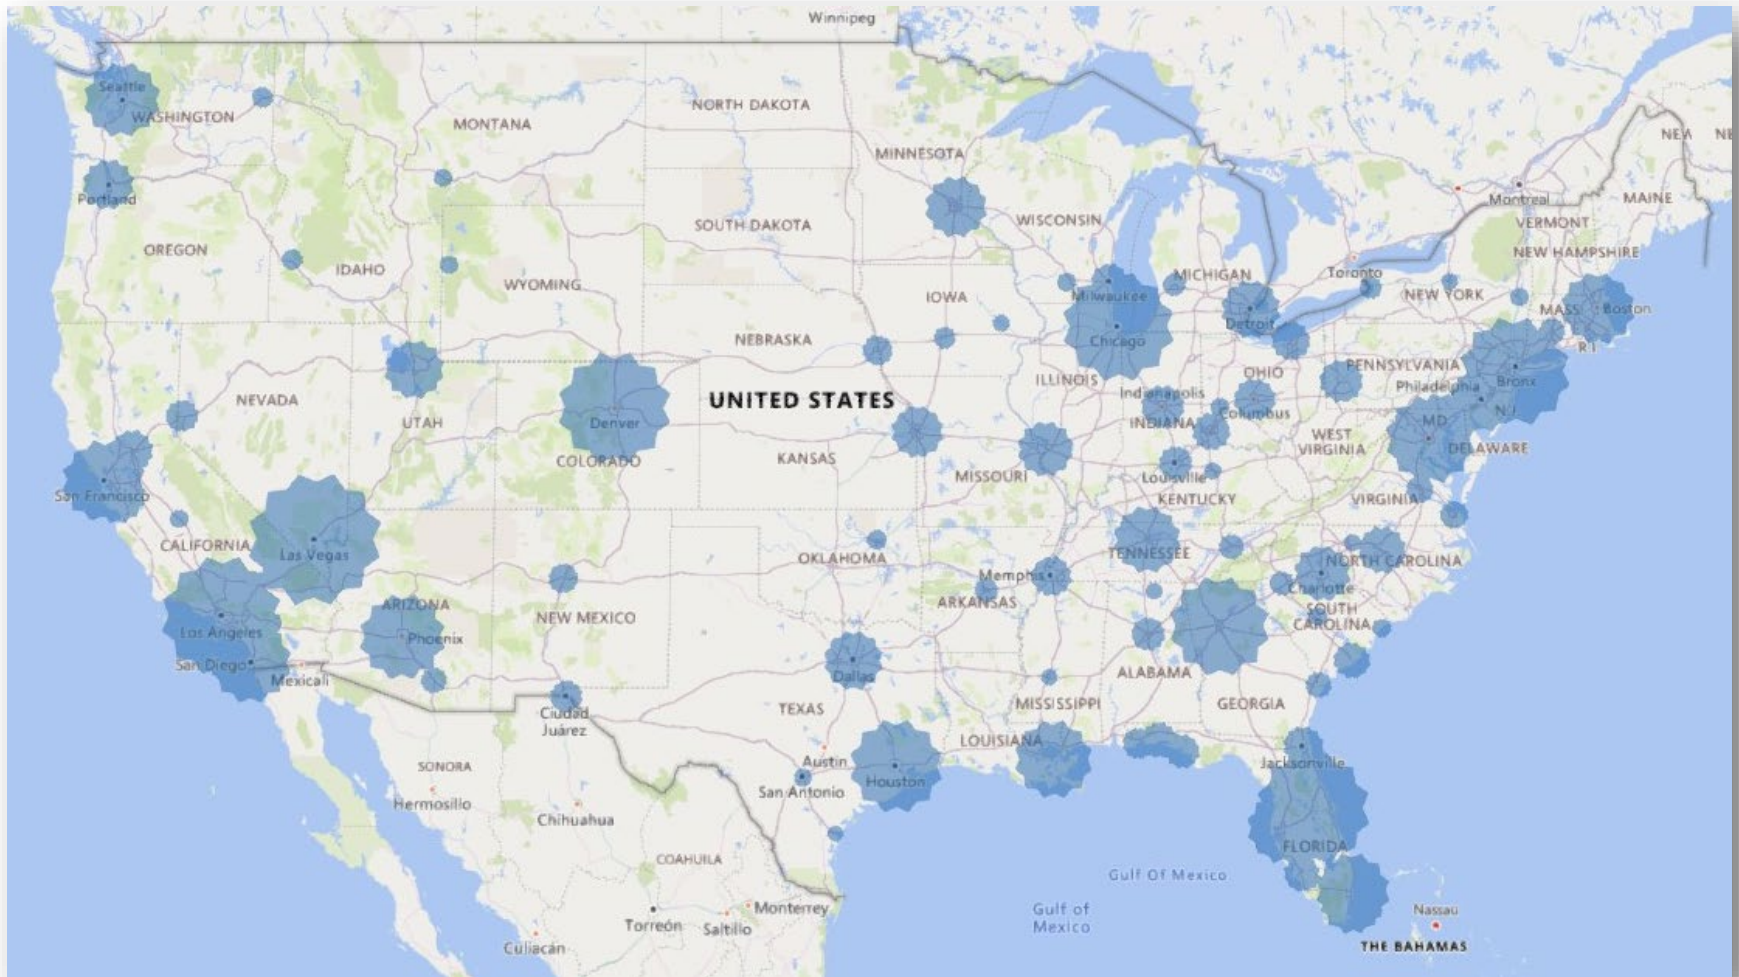

The LA Basin, Las Vegas, New York / Newark, Denver and Chicago Are the Top 5 Catchment Markets for ABI for Resident Passengers

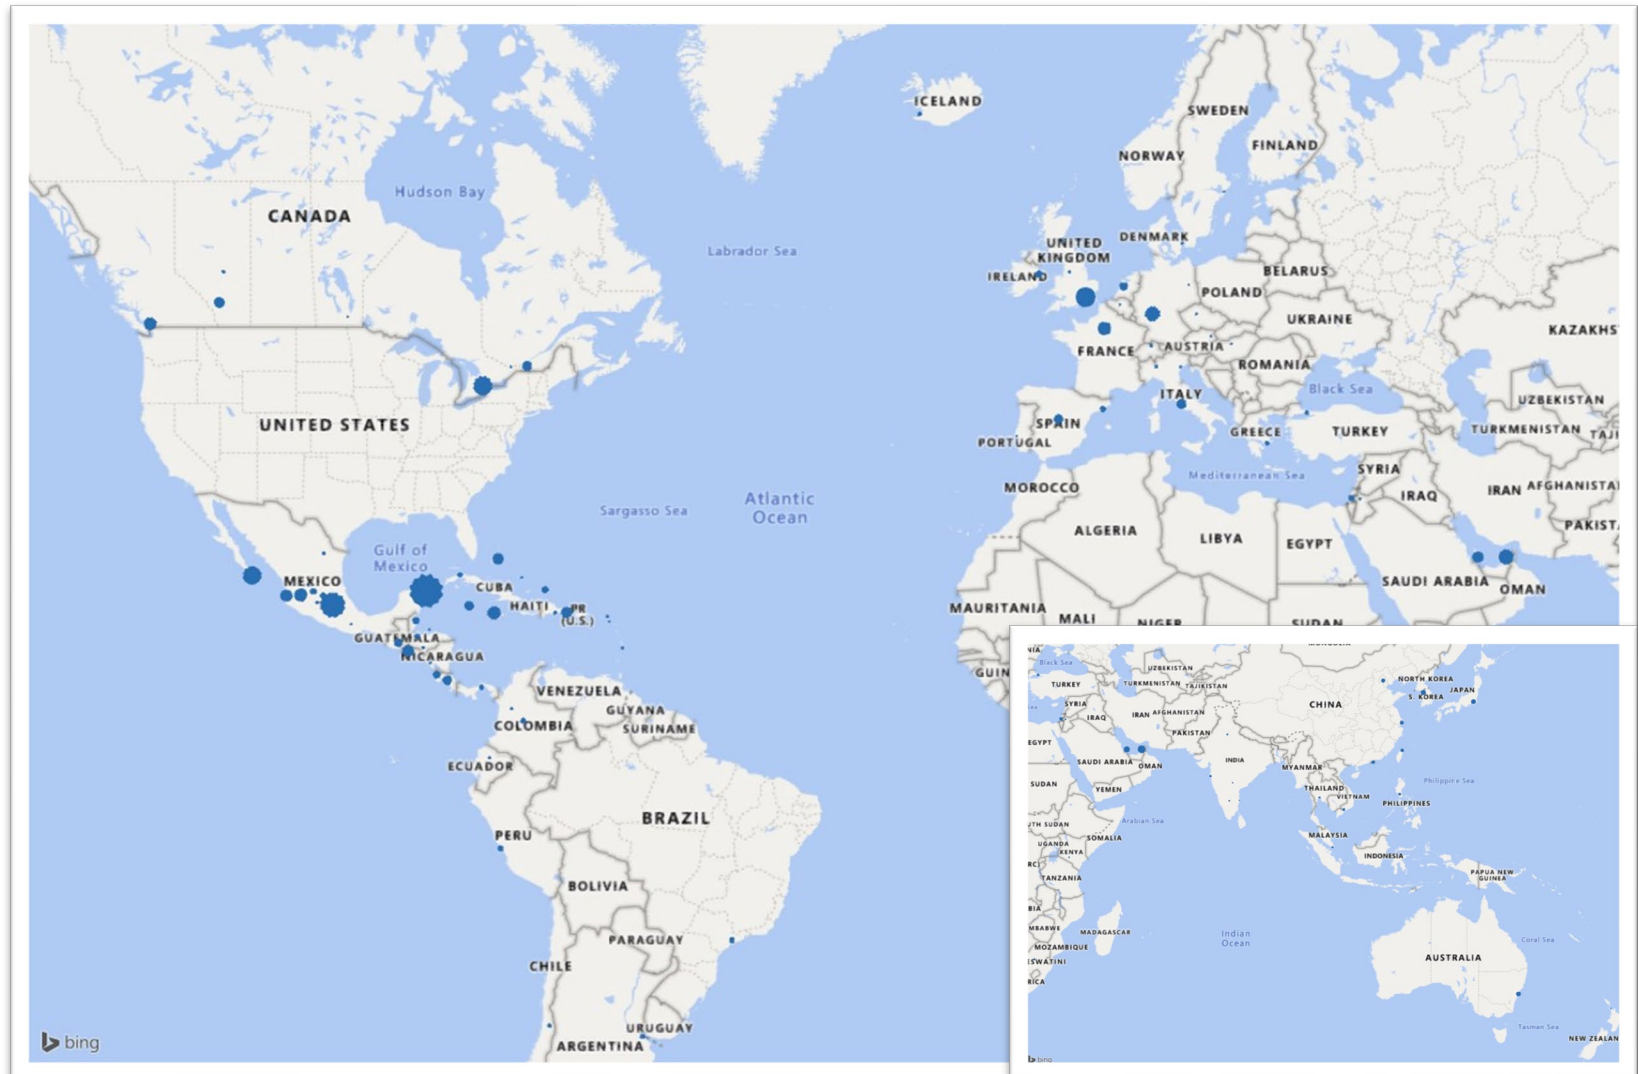

The LA Basin, New York / Newark, Chicago, Washington, D.C., and Atlanta Are the Top 5 Catchment Markets for ABI for Visiting Passengers

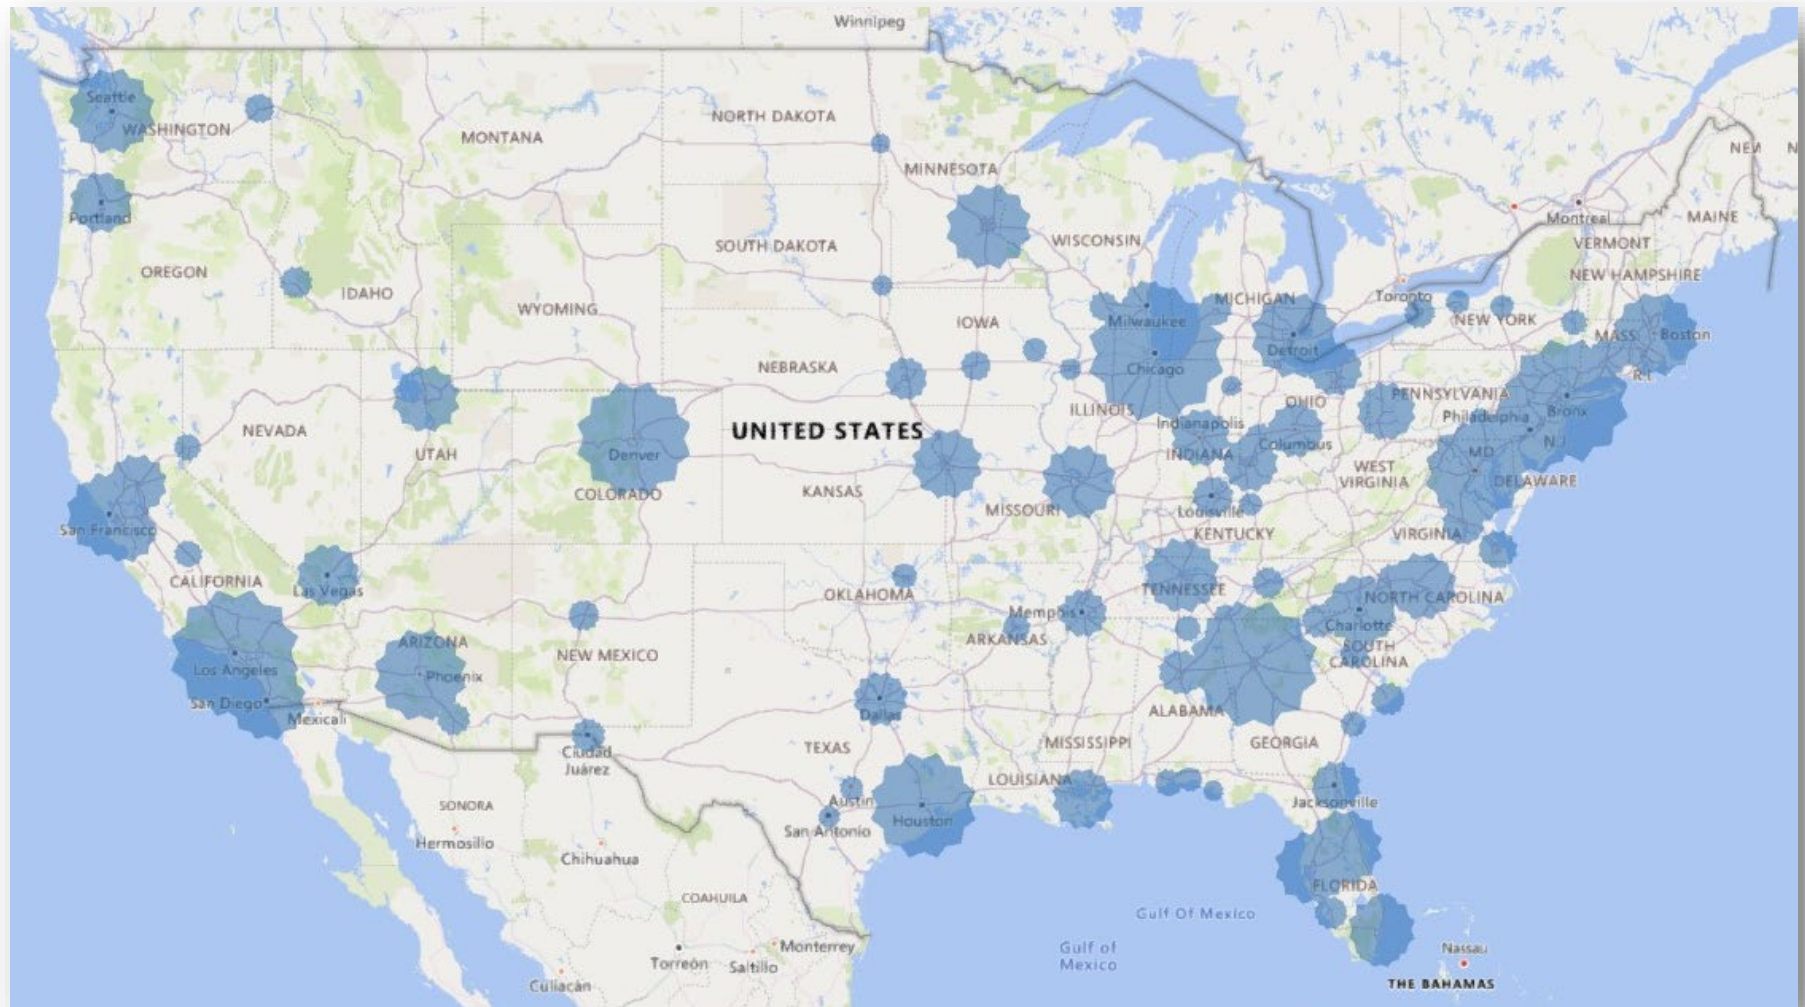

Abilene Resident Catchment Passenger Traffic is Heavily Weighted Towards the East Coast, Florida and Large Western Destinations

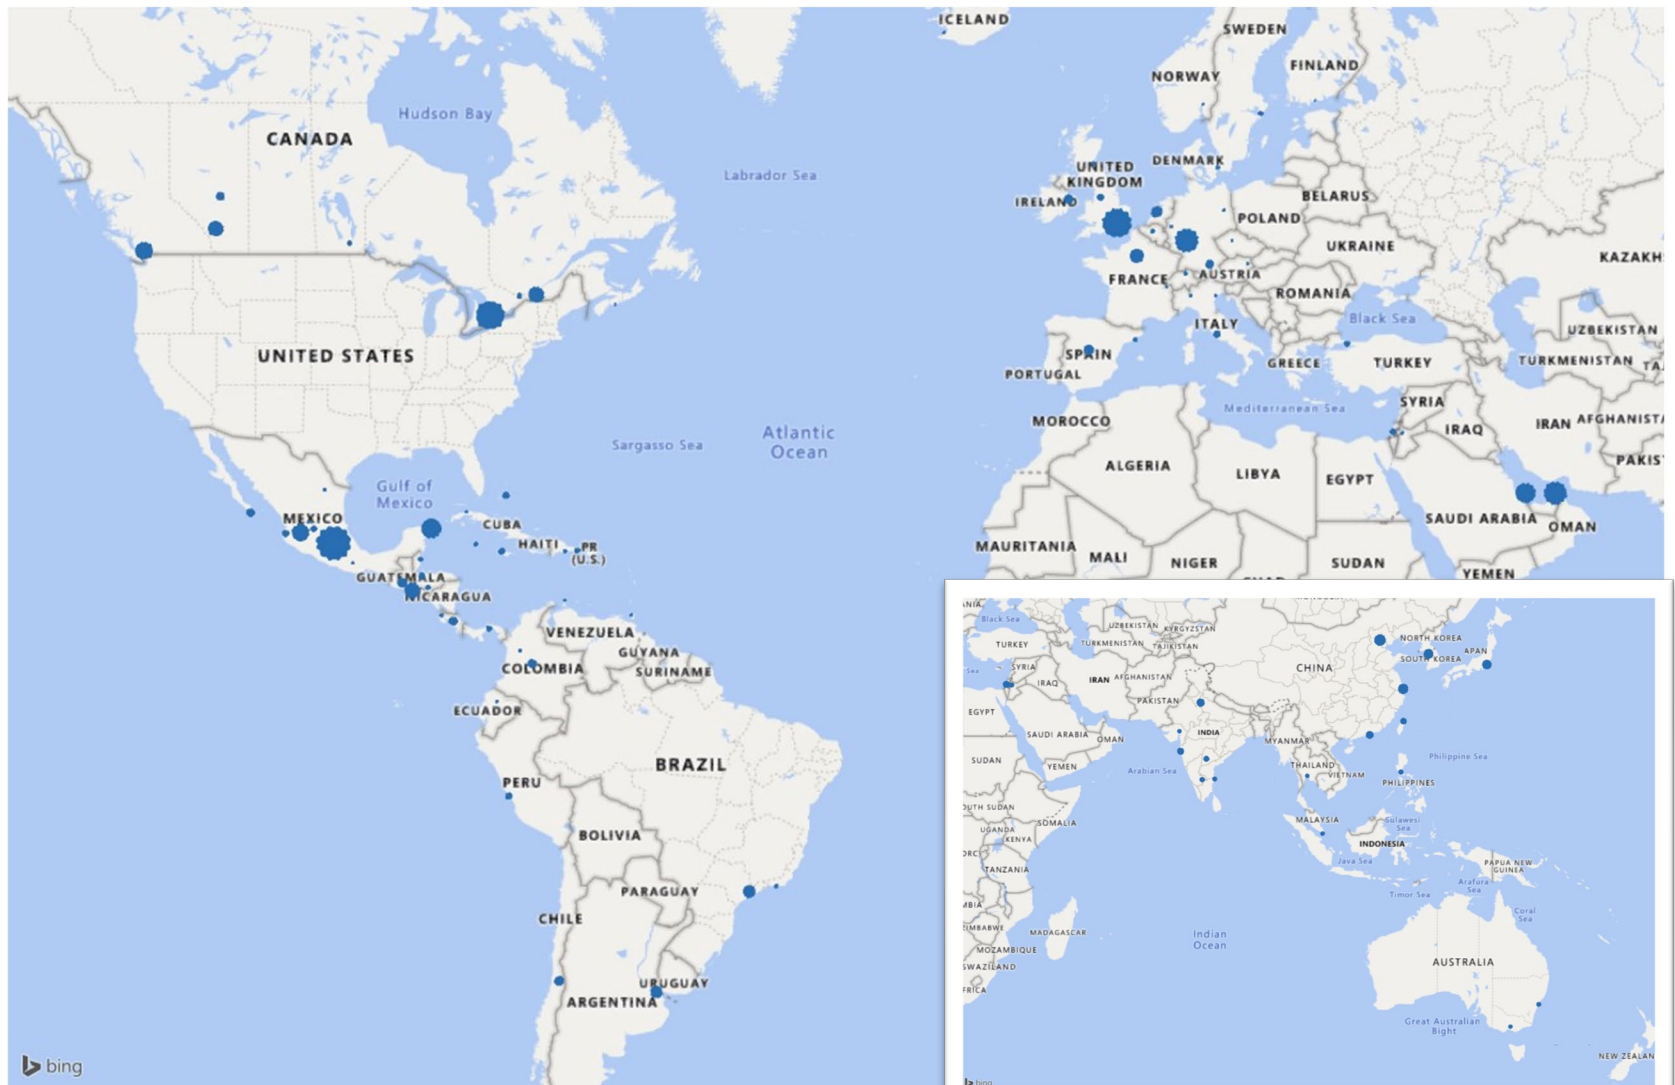

International Resident Passengers Favor Destinations in Europe and the Caribbean

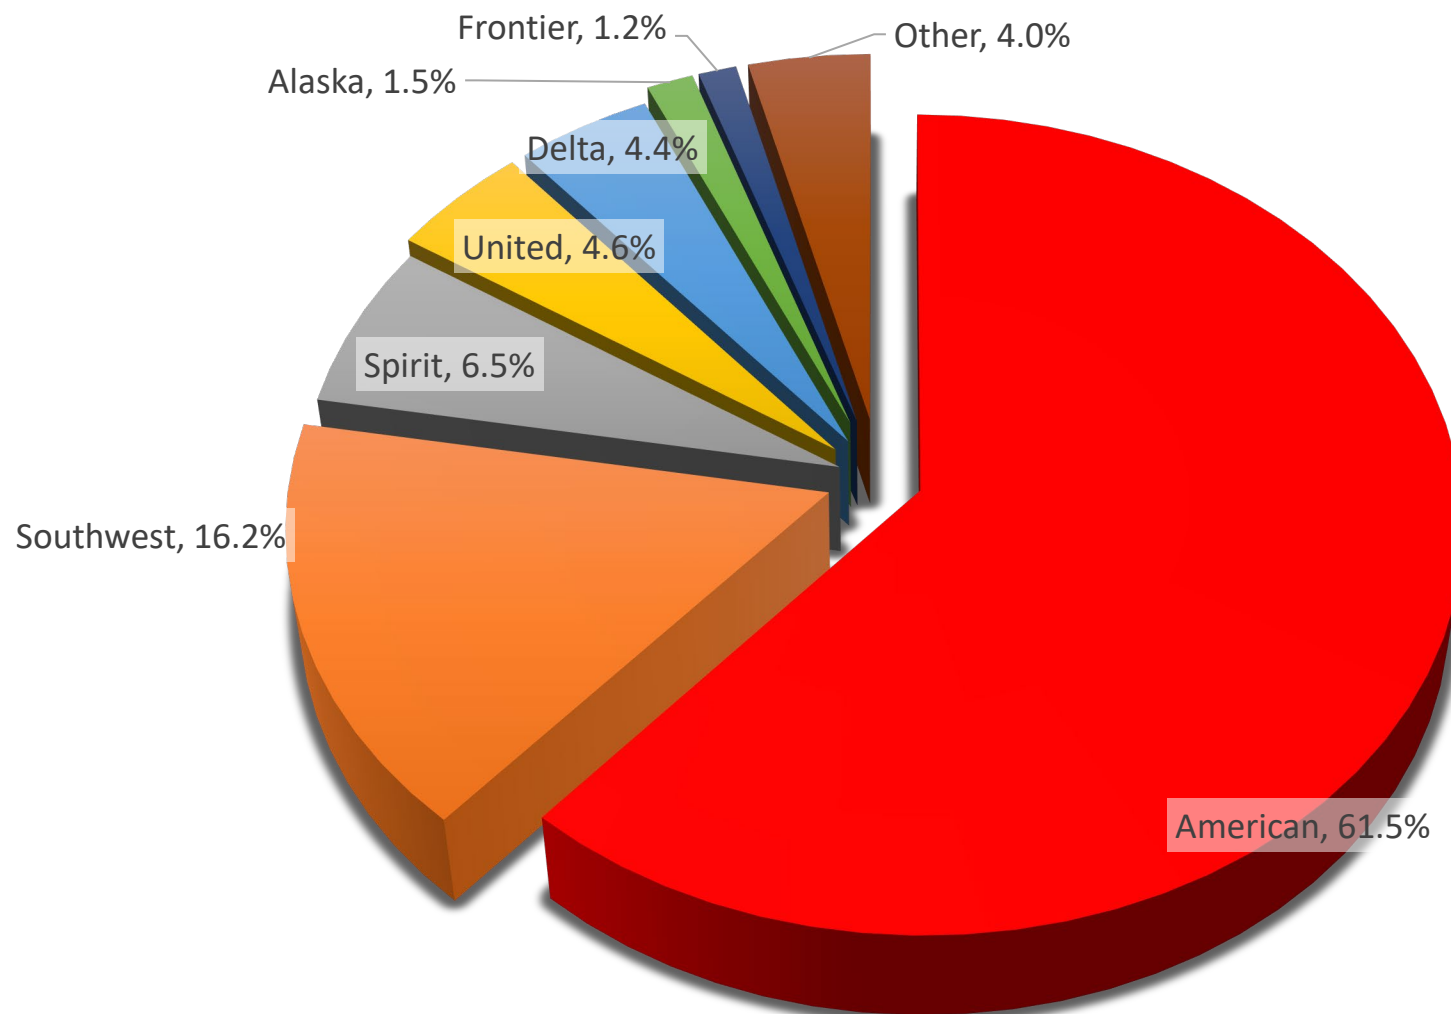

Abilene Visitor Catchment Passenger Traffic is Heavily Weighted Towards the East Coast, Especially NYC

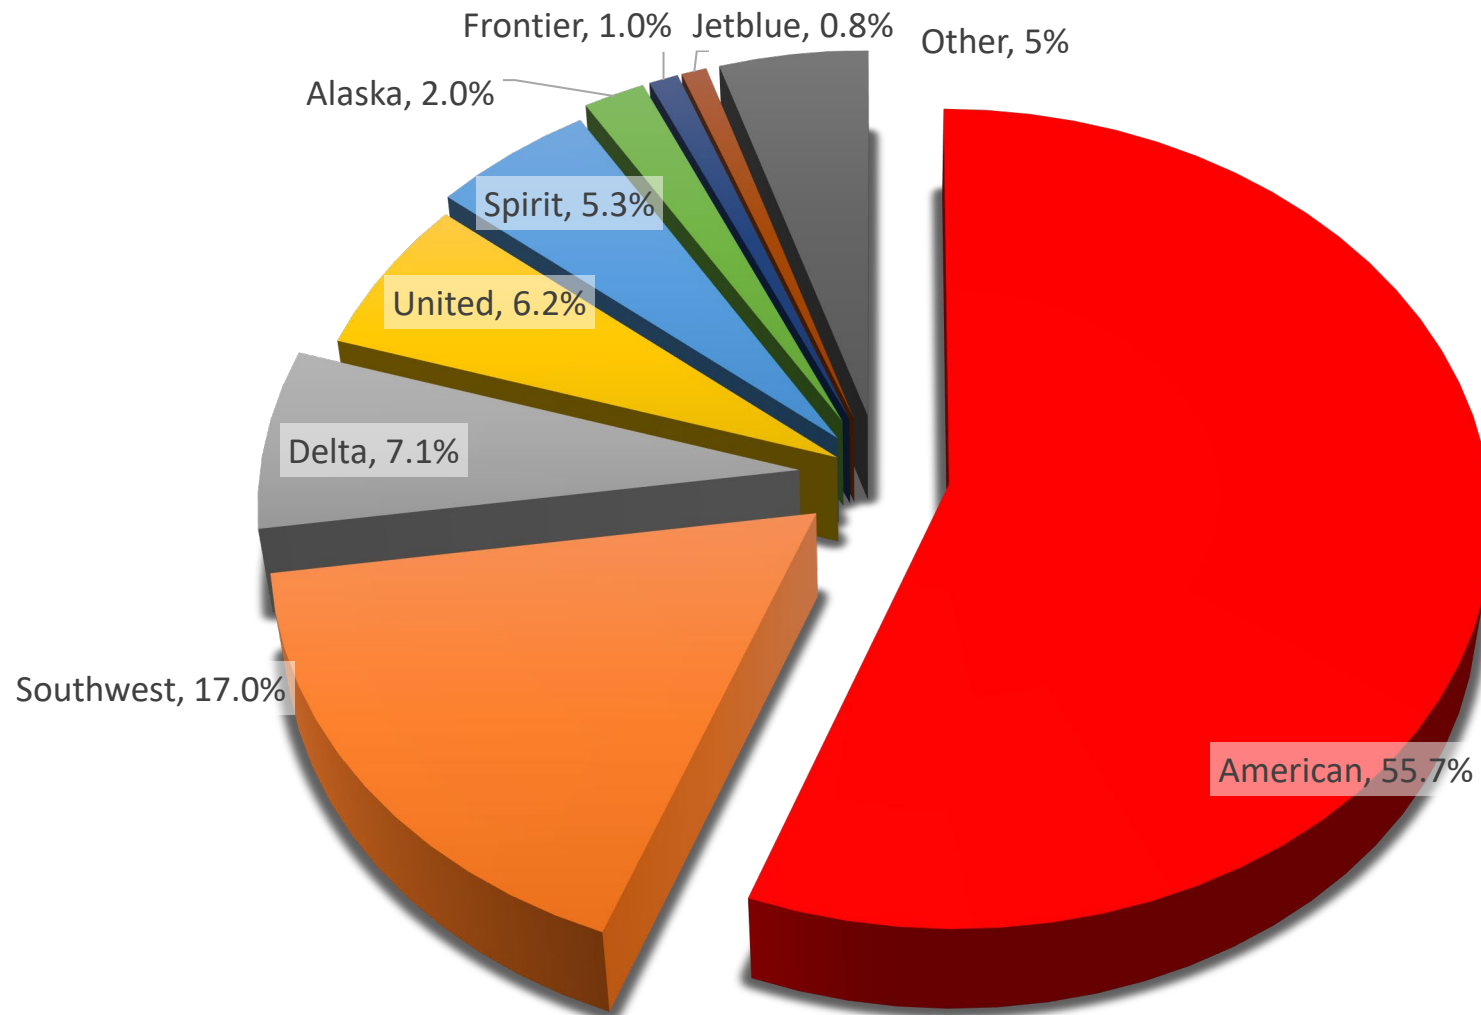

International Visitor Passengers Favor Destinations in Europe and the Caribbean

American Carries the Largest Share of Resident Passengers, But Southwest Carries a Large Portion Along With Other Airlines

American Has a Smaller Share of Visiting Than Resident Passengers. Southwest Has About the Same
